### Sewer Maintenance Update

Hydro-Klean, LLC will begin installing the sewer main liners beginning on Wednesday February 3rd. This work will take place at various locations throughout the City and you may not see work taking place near your property right away. The work being performed is weather dependent and cold weather may briefly interrupt the Contractor's progress.

### Door Hangers

The Contractor will notify individual property owners with door hangers the day prior to liner installation. **Please check your front or side doors for this notice at the end and beginning of each day.** The door hangers will notify you when the sewer liner installation is going to impact your sewer service lateral. During this timeframe the Contractor will ask you to reduce water usage to help prevent sewage backups. Please do not use bathtubs, dishwashers, or washing machines during this time. Heavy water usage during this work could cause sewage backups. Sewer liner installation is normally completed in one day and once completed you can return to using water normally for the remainder of the project.

### Preparing for Liner Installation

You may notice an odor outside if you are near the lining process. To prevent this odor from getting inside your house or building you should pour approximately one gallon of water down all floor drains or rarely used sinks, tubs or toilets. This will restore the water barrier between your plumbing fixtures and the sewer main which can dry out during long periods of inactivity. **If you have new plumbing concerns during this project you should contact the Construction Manager or the 24-hour Project Help Line at 1-855-845-5326 before calling a plumber.**

### COVID-19 Precautions

The Contractor will be taking extra steps to monitor and promote safe practices during construction. The construction staff will honor social distancing while interacting with residents and we ask that you do so in return.
